IPR AND INNOVATION CELL

Incorporating innovation into daily life fosters new ideas and perspectives. Colleges foster innovation and creativity, which are crucial for human progress. Innovators thrive in an environment that promotes new ideas. At R K Vigyan Mahavidyalaya, we aim to encourage students' innovative thinking by providing them with opportunities.

- **IPR and Innovation Cell**
- **Research & Development Cell**
- **Co-curricular Activities Cell**

At R K Vigyan Mahavidyalaya, we help students develop skills for successful business ownership in start-up ventures. The Training and Placement cell provides regular training sessions on personality development and communication skills to help students express themselves more effectively. Insiders are invited to stay up-to-date on industry advancements and gain technical knowledge. Expert lectures help students understand the importance of intellectual property rights (IPR).

Research leads to the creation of intellectual property. Over the last three years, many undergraduate students have participated in self-sponsored internal research projects. Our college supports research through the "Research Development Cell" (R&D Cell), comprised of senior members from all science disciplines and the principal. The R&D Cell encourages students to participate in research competitions, including debates, model making, quizzes, oral and poster presentations, and quizzes.

The institute provides all necessary resources for establishing an incubation center. The Institute encourages student creativity by hosting guest lectures on entrepreneurship and business startups. The collaboration between the R&D Cell and the IPR and Innovation Cell benefits students.
